Business Case and Functional Requirment

1. Business Model and Problem Statement

Organization Name & Type

Club Fitness Gym Management System

Club Fitness Gym Management System will be tailored to a medium-sized fitness center, providing gym subscription programs, individual training, group fitness, and health and fitness programs to students and working employees. The system assists in the management of the members, trainers, schedules, attendance as well as payments in a centralized platform that enhances efficiency and overall operations of the gym.

The Current Problem

As gym management, Club Fitness currently operates on manual records and spreadsheets, as well as disintegrated software to handle memberships, payments, schedule of classes, trainers and attendance. The resulting effect of such a fragmented approach is outdated or duplicated member data, errors in billing, delayed renewals, and excessive administrative work.

This absence of centralized system also results to trainers double-booking, overcrowded classes, inadequate use of resources and lapses of payment monitoring. Also, there is no real-time attendance, usage of trainers, and the most popular classes in the management, which restricts efficient decision-making and future planning.

The Solution

Club fitness Gym Management System database will integrate all the core gym activities into one system. The system will take care of the records of members, membership, payments, schedules, trainers and attendance and will enforce data consistency and business rules. The database will enhance the efficiency of the operations, guarantee proper billing and give the

management actionable information through reporting and analytics by eliminating redundancy and automating routine processes. In the end, the solution will enable the running of the gyms in a smoother way, a better experience of the members, and business growth that will be sustainable.

2. Operational Scoping

A. What operations will be captured by the database?

- Recruiting new gym members and renewing member profiles.
- Handling membership plans, renewals and expirations.
- Booking of fitness classes and trainers.
- Taking attendance of the members who have visited the gym and classes.
- Checking payments and balancing payments.

B. What information needs to be tracked?

- Member Information: personal information, contact information, membership information, and date of joining.
- Membership Plans: Type of plan, term, price and benefits.
- Trainers: Trainers, their certification, schedules, and classes they are assigned.
- Classes and attendance: Information about classes and the schedule, capacity and participation of members.

C. What are the business rules and constraints?

- A member must have active membership, which means access to the gym facilities or the ability to take classes.
- An instructor will not be able to be deployed to two classes at the same time.
- Each member can have access to one membership package at a time.
- Class enrollment cannot exceed the defined maximum class capacity

3. Stakeholder Analysis

Role1: Gym Manager: Track gym performance based on revenue, attendance and trainer utilization reports.

Role 2: Front desk Staff: Managing memberships, registering, and payments easily.

Role 3. Gym member: See the membership status, gym schedule, and individual attendance.
